

[Adjustable Speaker Mount]

Abstract

The Adjustable Speaker Mount is a two-piece adjustable speaker mounting device, consisting of a speaker mounting ring and a housing. The speaker mounting ring fits inside the housing in a fashion that allows it to be swiveled so the speaker can be aimed to improve sound quality by directing the sound emanating from the speaker toward the ear of a listener. The speaker mounting ring is comprised of a material that can be modified to allow the installation of several size speakers. In addition, the housing is comprised of a material that can be modified to allow modification for installation in a variety of enclosures and attached to said enclosure or surface by means of a housing mount.
